

Silvana Della Camera Photography

Hello,

I'd like to wish you and yours a Happy Thanksgiving! For me, holidays are bittersweet. I guess it's a flavor that is added as a result of time going by and living long enough to taste it.

Next Saturday, November 25th, I will be in York, Maine at the [Focus 244 Gallery](#). If you are out and about, come say hello. Once again, I am happy to have work on display this month along with the art of other wonderful photographers. In addition to the Artist's Reception later that evening, there will be a Holiday Fair throughout the day where many of us will have tables of gift items and art. So do stop by if you are in the area. It would be very nice to see you! As an added treat, Nubble Lighthouse is getting its festive lighting turned on that evening too!

Thanks,
Silvana

Holiday Fair

November 25 - 11:00 AM - All Day

Focus 244 Gallery - York Maine

Reception

November 25 - 6:30-9:30

PlanIt! Pro Workshop

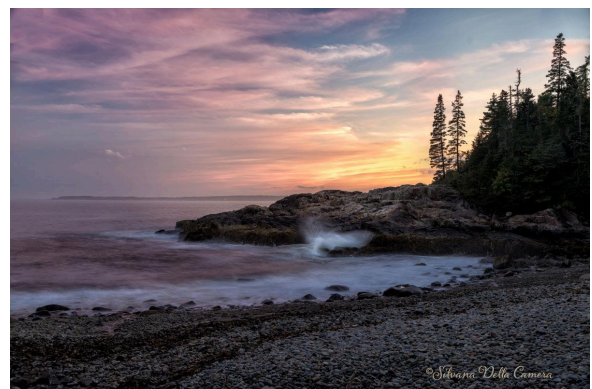

Learn how to use PlanIt!, the photographer's planning tool. Do you know how to quickly determine the location of the Moon or Sun as it rises over a lighthouse or specific building? Do you know when the Milky Way will be visible and where it will be relative to your location? Do you know how cloud cover will impact your photograph? Plan It! allows a photographer to measure twice, cut once, and achieve a successful capture.

December 16th

Printing an Image makes it a Photograph

Think I am nuts? Maybe, but take a moment and ponder about it. Back in the day of film, once you processed your roll, you ended up with something physical. Whether it was prints or slides, you always had the physical product in your hand. In the digital world, we no longer have the physical end-product of photography unless we ...

How to: Photograph a Solar Eclipse

We have an annular eclipse coming up as well as the “North American” eclipse in April 2024. The following how-to applies to any solar eclipse, not just the ones noted. It also applies to anytime you wish to photograph the Sun. The Sun is a wonderful object to photograph, eclipse or not. Safety. Safety. Safety Did I say safety? This ...

Gear Review - Variable Infrared Filter

I have been playing with a variable infrared filter of late. I came across it on Amazon and it intrigued me. At first, I thought it was one of the many mislabeled items on Amazon, but I clicked on the item to see what it all about. This is a circular glass filter, with an infrared range of 530 nm ...

X-Ray Vision at Night

Infrared gives us X-ray vision. Well sort of. It allows us to see past our own narrow (pathetic) bandwidth. It is perfect for night photography. You may think this is an oxymoron. Infrared is normally viewed as photography under a blazing sun, perhaps peppered with some puffy clouds. A type of photography generally shot within the 10 am-2 pm window ...

A Photographer is a Painter (in reverse)

A couple of years ago, I had a table at a Christmas fair selling photographs printed on a variety of media including fine art prints. I overheard someone commenting on the price of the prints. She remarked to her friend that she didn't understand the price of a photo. "After all, it's not like a painting or anything. All you ...
