AI - The Good, the Bad & the Ugly

AI. Artificial Intelligence. It's everywhere these days. AI is defined as the simulation of human intelligence by software-coded heuristics. Heuristics are the strategies derived from previous experiences with similar problems. There are three schools of thought about using AI. It will greatly assist humanity. ...

How-to: Photographing Carnival Lights

When was the last time you went to a carnival? You know, the traveling show you looked forward to as a kid that marked the start of summer. Yes, they are noisy, loud, and crowded but prime fodder for photographing a variety of whirling multi-colored lights. Every carnival is a bit different, albeit with similar rides. The configuration of the ...

Night Filters: To Filter or Not Filter, that is the Question

Night Filters. What are they? What do they do? Do they really work? There are different perspectives on these filters. Some feel that they don't really function, but simply cast a blue cast on an image. Others feel they do perform a function, in this case, to balance the numerous white balance issues created with the ever-increasing use of LED ...

How-to: Star Trails

Images with star trails are captivating. They are also easy to accomplish and can be created most anywhere, even in a light polluted city or your own backyard. Creating a star trail image is a great way to get started in astrolandscape photography. It's a type of night photography that never gets old. Digital cameras can see very well in ...

How-to: Photograph an Astrolandscape

Night photography is a challenge in many ways. Our night vision is quite pathetic so we need to lean (heavily) on our cameras to tell us how much light is actually available. Luckily, digital cameras see really well in the dark so this becomes a simple exercise in understanding the histogram. These steps are for photographing an astrolandscape in your ...
