

Silvana Della Camera Photography

Did you guys witness the aurora this past weekend? I have seen amazing photographs, many of them with the flares of meteors shooting through them. The Perseid meteor shower is still active and will be so until the end of the month so if you didn't see or photograph them during the peak, you still can witness them. How to shoot them? Read up on how to photograph an Astrolandscape image in the blog post below. Follow the instructions in the post and set your camera on interval shooting to get as many frames as possible back to back to increase your chances of capturing the meteors.

Coming up this Saturday is a [photo walk at Scituate Lighthouse](#). Now that the scaffolding is down and the repairs completed, it's time to visit this beauty. The weather is calling for cloudy skies and a low of 66 degrees. Cloud stacking anyone? If the stars fail to show up, we will head toward Scituate Center for night shots of this seaside town after we get our fill of the lighthouse.

Last Saturday, we finally got good, albeit dewy conditions at Neds Point Lighthouse. Another photo walk to this charming lighthouse will be scheduled soon. Below, Neds Point Lighthouse and the beautiful colors of Saturday's sunset.

Clear skies,
Silvana

Photo Walk - Scituate Lighthouse Sunset and Star Trails - August
17th, 2024

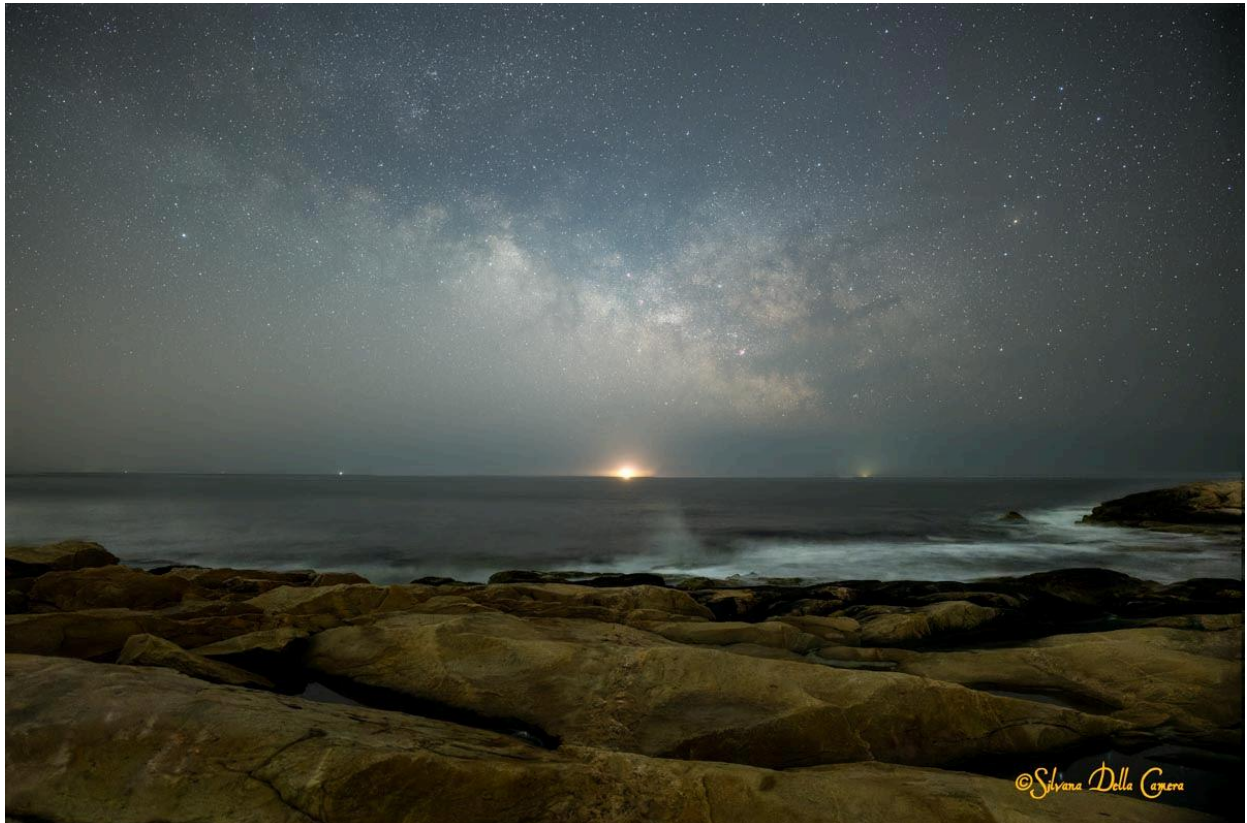

Let's plan an evening walk to explore the Scituate Lighthouse, which is the fifth oldest lighthouse in New England and eleventh oldest in the United States. We will begin our walk during the golden hour, take some pictures of the sunset, and continue exploring the changing light until it gets dark. We will then photograph the star trails (if the skies cooperate!).

How to Photograph an Astrolandscape

Night photography is a challenge in many ways. Our night vision is quite pathetic so we need to lean (heavily) on our cameras to tell us how much light is actually available. Luckily, digital cameras see really well in the dark so this becomes a simple exercise in understanding the histogram. These steps are for photographing an astrolandscape in your ...

Gear Review - Focus on Stars Filter

Photographers always have their eye and ear out for a gadget to help make a task easier. It is often a quest not unlike the search for the Holy Grail. Photography is a combination of artistic creativity with often high technical requirements. A fusion of left brain/right brain as it were. Some types of photography offer a higher challenge than ...

In Search of the Pinpoint Star

This is probably the most difficult part of an astro photograph. It doesn't matter if we are talking about astrolandscapes or deep space photography, the perfectly focused pinpoint star is a challenge. It's almost an oxymoron given that stars are so enormous. But I digress. I have been photographing stars for a long time. My quest started in my film ...

How to Photograph the Aurora

We are entering a wonderful time to experience the aurora close to home. Learn how to plan and photograph this most beautiful and elusive event. Our Sun is currently increasing its activity, which is evident from the appearance of numerous sunspots on its surface, flares, and Coronal Mass Ejections (CMEs). These phenomena have a significant impact on Earth since everything ...
