Happy October!

We are approaching the last few weeks of Milky Way season in the Northern Hemisphere. Tomorrow night is looking promising (at this point anyway), so I scheduled a [Meetup at the Frosty Drew Observatory](#). This is a free event and a couple of spots are left.

Comet C/2023 A3 (Tsuchinshan-ATLAS) is here! This comet has great potential of being a very bright one. This may rival the brightness of Comet Neowise in 2020! Currently it is visible around dawn but in 9 days the comet will come around the Sun and we should see it in the evening. Don't miss it or you'll have to wait 88,000 years before it will come by again. 🌠

How many of you print your photographs? If you don't print your images, your captures are in jeopardy. Below is a link to a post that delves into why they are and the importance of putting images onto physical media.

Have a great week!

Clear skies,  
Silvana

[Planit! Pro Workshop - October 26, 2024](#)

Learn how to use PlanIt!, the photographer's planning tool. Do you know how to quickly determine the location of the Moon or Sun as it rises over a lighthouse or specific building? Do you know when the Milky Way will be visible and where it will be relative to your location? Do you know how cloud cover will impact your photograph? Plan It! allows a photographer to measure twice, cut once, and achieve a successful capture.

\$52.00

Shaken, not Stirred

As the title may suggest, I am a fan of Bond films (an acute understatement). I've viewed every single Bond film, numerous times over. Each time I revisit one, I see something I have missed before, even though I am completely engrossed from the opening to the closing credits. I will suggest applying this well-known Bond phrase as a photography ...

[Printing an Image makes it a Photograph](#)

Think I am nuts? Maybe, but take a moment and ponder about it. Back in the day of film, once you processed your roll, you ended up with something physical. Whether it was prints or slides, you always had the physical product in your hand. In the digital world, we no longer have the physical end-product of photography unless we ...

**NEW BOOK! Night Shades - A Guide to Photography After Dark**

Coming December 2024

NEW BOOK! Night Shades - A Guide to  
Photography After Dark

Like daytime photography where you photograph landscapes, nature, portraits, architecture and more, night photography has a variety as well, albeit in the dark of night. Milky Way landscapes, cities at night, star trail photography, light painting and a great deal more can be realized after darkness falls.
