

SILVANA DELLA CAMERA PHOTOGRAPHY

Did you have the opportunity to see the lunar eclipse last week? I've seen some beautiful captures of it! With all lunar eclipses, there is a solar eclipse two weeks preceding or following the lunar event. On Saturday, March 29th, we will have an opportunity to see a partial solar eclipse. For the northern East Coast of North America, the eclipse will be visible at sunrise, so a seaside eastern-facing location will be ideal. Since the eclipse begins at 5:24:31 AM, the Sun will already be in mid-eclipse when it becomes visible on the horizon at 6:31:22 AM. It will be a very cool sight! Get ready! Below is a post on how to photograph a solar eclipse. Always remember to use caution when viewing the Sun. [Here](#) is a list of filters and the link to the Photographing a Solar Eclipse Workshop recording from last year. [Check](#) to see if the eclipse is visible in your area.

Coming up this Saturday night, we have [light painting at Larz Anderson Park](#) photo walk! Last call to join us for a fun night of creativity! Attendees will receive a light painting tool for creating orbs and more.

Also, a quick reminder for anyone considering joining the [Milky Way in Acadia NP](#) photo tour: reasonably priced lodging disappears during March, so consider this when planning.

Clear skies!

Silvana

[How to: Photograph a Solar Eclipse](#)

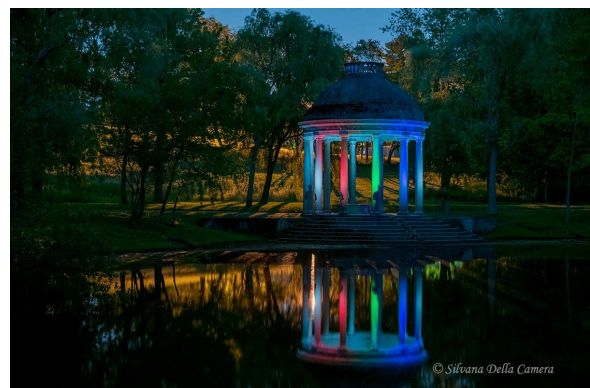

The Sun is our closest star and an ideal subject to photograph. The following how-to applies to any time you wish to photograph the Sun. The Sun is a wonderful object to photograph, eclipse or not. Safety. Safety. Safety Did I say safety? ...
